For agreeing to participate with us in our research study and providing us with information for 2021-2023, we will send one $100 gift card to your organization. The gift card will be mailed to you after providing us with information about your organization's 2021 activities.

After the data collection is completed, we will enter the information into a Data Dashboard that will be shared back with community members. We will be demonstrating the impact of local work on residents’ health with this data and showcasing the work being done by community groups. Both community leaders and members can use this information to plan for future projects.

To Participate or Learn More, Email HPTED-PROJECTS@UMICH.EDU

The Prevention Research Center of Michigan (PRC-MI) seeks to measure the impact of organizational activities in ways that increase community connections and positive neighborhood change. To accomplish this, we are looking to connect with you to learn more about your organization’s work within the city of Flint.

Participating With Us
If you are interested in participating, please note that your name will not be included in any reporting, but we will include your organization's name. Our initial conversation will focus on capturing information on events that were held in 2021. We will then reach back out through the remainder of this year, as well as in 2023, to collect information about future events. Your participation will take roughly 30 minutes. This time may vary depending on the volume of data your organization has to provide each year.

Benefits of Participating
For agreeing to participate with us in our research study and providing us with information for 2021-2023, we will send one $100 gift card to your organization. The gift card will be mailed to you after providing us with information about your organization’s 2021 activities.

After the data collection is completed, we will enter the information into a Data Dashboard that will be shared back with community members. We will be demonstrating the impact of local work on residents’ health with this data and showcasing the work being done by community groups. Both community leaders and members can use this information to plan for future projects.
